

## Student Success Enrollment History, 2007-2011

The most successful HCC AtD intervention has been the implementation of required Freshman Success Courses (FSC). This intervention has been progressively implemented, with district-wide adoption for all new students to HCC with less than 12 semester credit hours of college coursework in Fall 2007. The numbers of students impacted by this intervention has been scaled as follows:

Table 1: Enrollment History of GUST 1270 Freshman Success Course

Year <sup>1</sup>	Number of Students in GUST1270 Freshman Success Course <sup>2</sup>	Students in intervention as % of total Fall SCH enrollment <sup>3</sup>	Students in intervention and in Fall Cohort as % of target population, which is all students in the stated Fall AtD Cohort <sup>4</sup>
Fall 2007	3,866	8.6%	32.6%
Fall 2008	4,658	9.4%	34.8%
Fall 2009	5,629	9.9%	33.1%
Fall 2010	5,644	9.1%	30.8%
Fall 2011	5,602	8.8%	30.1%

1. Figures are for Fall semesters only, not all of the year's semesters. Annual figures would be approximately 175% of the Fall figures, since new students arrive in each semester.
2. The original FSC intervention course was GUST1270. Although there are now several comparable versions, ONLY GUST1270 figures are reported in the above chart.
3. The Total SCH Enrollment is only the stated Fall semester, the percent is the number of Gust1270 enrollments in the stated Fall as a percent of this Fall enrollment. Other enrollees took an FSC course in earlier semesters.
4. The target population consists of all new students at HCC in the stated Fall's AtD Cohort. GUST 1270 enrollees include students not in the stated Fall Cohort, so the percent is the number of GUST1270 enrollees actually in the stated Fall Cohort as a percent of the total Fall Cohort student count

Table 2: Enrollment History of All Comparable Freshman Success Courses Combined

Year <sup>1</sup>	Number of Students in All Freshman Success Courses <sup>5</sup>	Students in intervention as % of total Fall SCH enrollment <sup>6</sup>	Students in intervention and in Fall Cohort as % of target population, which is all students in the stated Fall AtD Cohort <sup>7</sup>
Fall 2007	4,188	9.3%	34.3%
Fall 2008	5,299	10.7%	38.2%
Fall 2009	7,106	12.5%	40.2%
Fall 2010	8,984	14.5%	44.9%
Fall 2011	9,267	14.5%	45.1%

5. The original FSC intervention course was GUST1270. There are now several comparable versions of this course designed for specific programs—these are: engineering (ENGR1200), health careers (HPRS1200), education (EDUC1200), and workforce training (LEAD1200). Figures reported in the above chart are for all FSC courses.
6. The Total SCH Enrollment is only the stated Fall semester, the percent is the number of FSC enrollments in the stated Fall as a percent of this Fall enrollment. Other enrollees took an FSC course in earlier semesters.
7. The target population consists of all new students at HCC in the stated Fall's AtD Cohort. FSC enrollees include students not in the stated Fall Cohort, so the percent is the number of FSC enrollees actually in the stated Fall Cohort as a percent of the total Fall Cohort student count
